Milestone 1

Instruction

Create a public repository on Github. Add a license and a README.md file. Invite your instructor (github user **wvuvectors**) and classmates to participate as collaborators.

Timeline

This milestone should take 15-30 minutes to complete. You should do it early as most of your code for this class will live in your repository.

Where to start

Start at the Github page (https://www.github.com/). Check out Youtube, Stack Overflow, even reddit - there are plenty of online resources describing how to accomplish this milestone.

Be very cautious about the AI-generated content being pushed by Google, etc.in response to searches. These are often incomplete, or just wrong.
